Artificial Intelligence & Data Science — Python — Machine Learning — Generative AI

Professional Summary

Artificial Intelligence and Data Science graduate with hands-on experience in Python, Machine Learning, Generative AI, LLMs, and RAG. Experienced in developing AI applications using LangChain, LangGraph, ChromaDB and Streamlit, with exposure to prompt engineering, document processing, retrieval, and model evaluation. Familiar with building and deploying end-to-end AI/ML applications and working with emerging AI technologies.

Technical Skills

Programming: Python, SQL.

Data Science: Pandas, NumPy, Scikit-learn, EDA, Data Preprocessing, Feature Engineering.

Machine Learning: Linear Regression, Logistic Regression, Decision Tree, Random Forest, Model Evaluation.

Generative AI: LLMs, Prompt Engineering, RAG, Multimodal RAG, Agentic AI.

Frameworks: LangChain, LCEL, LangGraph, ChromaDB, Groq API.

Tools: RAGAS, LLM-as-Judge, Pydantic, Streamlit, Docker, FastAPI, Git, GitHub.

Projects

Equity Research Report Intelligence System - Multimodal RAG

- Built a production-style multimodal RAG system that ingests equity research PDFs and answers natural language questions across text, tables, and charts with exact source citations, using a 5-layer extraction and retrieval architecture.
- Solved cross-document retrieval bias with a two-stage pipeline -bi-encoder retrieves 50 candidates, cross-encoder rescores by reading query and chunk together, keeping the top 5 for precision retrieval.
- Built persistent, filterable multi-document management in ChromaDB with metadata filtering, and deployed the system on Streamlit Community Cloud with Docker containerization.

AI Resume Screener

- Built an end-to-end resume screening pipeline using LangChain LCEL and a Groq-hosted LLM.
- Extracted and parsed candidate data from PDF resumes using pdfplumber; validated structured output with Pydantic.
- Generated real-time match scores and role-fit feedback via an interactive Streamlit interface.

AI-Powered Energy Management System

- Built an ML pipeline with anomaly detection to monitor, predict, and flag unusual energy consumption patterns from time-series data via an interactive Streamlit dashboard.

Education

B.Tech — Artificial Intelligence & Data Science

Saveetha Engineering College, Chennai

2021 – 2025

CGPA: 7.6

Certifications

- IBM Data Science Professional Certificate — Coursera / IBM
- Data Analyst Certification — ExcelR
